

Prajwal S Hangaragi

B.Tech – Computer Science & Engineering (AI & ML)

📍 Bangalore, India · 📞 7204557247 · ✉️ prajwal.s.2h@gmail.com

Profile

Computer Science undergraduate specializing in Computer Science Engineering in AI & ML, with hands-on experience building web-based developer tools, integrating automation pipelines, and deploying full-stack applications. Strong interest in backend systems, intelligent tooling, and scalable software solutions.

Technical Skills

Python Java JavaScript React React Native Expo Node.js Express MySQL PostgreSQL
FastAPI Supabase Firebase Gemini AI Groq AI LLMs Prophet scikit-learn Whisper API
HTML/CSS Git & GitHub CI/CD Machine Learning TensorFlow OpenCV Flask EfficientNet

Projects

ShopIQ — AI-Powered Kirana Management System

Expo · React Native · Supabase · FastAPI · Gemini 1.5 Flash · Prophet · scikit-learn · WhatsApp Business API · Whisper API · PostgreSQL

- Developed a full-stack mobile app using Expo + React Native with Supabase backend serving kirana store owners across stock, billing, and udhar (credit) management.
- Implemented AI demand forecasting using Prophet/scikit-learn to predict weekly inventory needs based on sales history, season, and local events.
- Built real-time stock tracking with barcode scanning, expiry date alerts, and auto-reorder generation integrated with a supplier comparison module.
- Designed WhatsApp automation layer sending weekly AI-generated business summaries and overdue udhar reminders to merchants in plain language.
- Integrated voice input in Hindi and Kannada using Whisper API allowing owners to update stock and sales without typing.
- Engineered profit analytics dashboard separating revenue from actual profit with dead stock detection, loss breakdown, and GST auto-tagging.
- Conducted merchant field interviews at Mathaji Mini Market, Bengaluru to validate problem statements and refine the feature set.
- Built end-to-end prototype at **OkCredit Finternship** — 8-week product hackathon — from problem discovery to working prototype.

PropagandaLens — Multilingual Propaganda & Rhetorical Manipulation Detection

Python · FastAPI · Groq AI · Helsinki-NLP · React · PDF Export

- Developed a multilingual AI tool to detect 8 rhetorical techniques (Fear Appeal, False Dilemma, Bandwagon, etc.) in English and Hindi.
- Integrated Helsinki-NLP for automatic translation and Groq-powered interactive chat for explainable AI findings.
- Architected a temporal timeline to analyze the evolution of manipulation across different time periods.
- Implemented high-fidelity PDF report generation for detailed manipulation analysis.
- <https://propaganda-lens.vercel.app/>

UnMask — AI Deepfake Detection System

Python · TensorFlow · EfficientNetB0 · Flask · OpenCV · MTCNN · Grad-CAM

- Built a real-time deepfake detection system using an ensemble of EfficientNetB0 trained on FaceForensics++ and Celeb-DF v2, achieving **94–96% accuracy**.

- Engineered an MTCNN-based face extraction pipeline with multi-run inference averaging, reducing false-positive rates on borderline images.
- Developed a Flask REST API supporting image and video analysis (frame-by-frame scoring with timestamp output), deployed with CORS and 2 GB file support.
- Delivered the full working system end-to-end at **FOOBAR 10.0 Hackathon** (Cybersecurity Domain) within the competition's time constraint.
- <https://unmask-nan8.onrender.com/>

KAPP - AI Career Map Navigator

Python · Gemini 2.5 AI · React · Multi-Agent System

- Architected a multi-agent AI system (Skill/Role/Roadmap Agents) to analyze resumes and generate personalized career roadmaps.
- Built a modern React frontend with glassmorphism effects and integrated Gemini 2.5 Flash for FAANG-level evaluations.
- Engineered a robust backend with PDF parsing pipelines to extract 100+ technical skills from complex resume layouts.
- <https://kapp-rho.vercel.app/>

Python Code Review Tool (Web Application)

Backend · JavaScript · GitHub Actions · Deployment · Full-stack

- Designed and built a static code analysis tool using Python AST.
- Developed a clean web interface for real-time code analysis.
- Integrated GitHub Actions to automate code reviews.
- Deployed as a public website with plans for expansion.
- <https://prash-2402.github.io/code-review-tool/>

Fitness & TDEE Calculator (Web Application)

Frontend · JavaScript · Health Calculations · UI Logic · Deployment

- Built an interactive calculator to compute TDEE using user inputs (height, weight, age, gender, activity level).
- Implemented calorie deficit/surplus logic based on fitness goals (cut, maintain, bulk).
- Designed a responsive UI for real-time calculation and user-friendly experience.
- Deployed as a public web application.
- <https://prash-2402.github.io/fitness-calculator/>

Achievements & Hackathons

OkCredit Finternship — ShopIQ (2025)

8-week product hackathon · React Native · Supabase · AI/ML

- Built an AI-powered kirana management app from scratch over an 8-week fintech product hackathon.
- Conducted real merchant interviews at a local Bengaluru kirana store to validate pain points and shape the feature roadmap.
- Shipped a working prototype in React Native + Supabase covering inventory, billing, udhar, demand forecasting, and WhatsApp automation.

FOOBAR 10.0 Hackathon — UnMask (Cybersecurity Domain)

TensorFlow · EfficientNetB0 · Flask · OpenCV

- Delivered an end-to-end deepfake detection system achieving 94–96% accuracy within the competition's time constraint.

Education

B.Tech in Computer Science & Engineering (AI & ML)

Christ University, Bangalore (Kengeri Campus)

2024 – 2028

Interests

Backend Engineering · Intelligent Developer Tools · Applied AI Systems · Automation · Scalable Web Applications
